

Compatibility Defect Report

Prepared by Ruknuddin Asrari | August 14, 2026

Defect Summary

ID	Title	Browser(s)	Severity	Priority	Status
CB-001	Mobile CTA overflows/wraps at narrow viewport	Chrome / Edge / Firefox	High	P1	Open
CB-002	Form select height differs from text input in Firefox compatibility scenario	Firefox	Medium	P2	Open
CB-003	Service card text wrapping causes uneven card heights at tablet width	Firefox / Tablet	Medium	P2	Open
CB-004	Secondary button focus outline appears clipped in Edge compatibility review	Edge	Low	P3	Open

CB-001 - Mobile CTA overflows/wraps at narrow viewport

Area: Responsive Behavior | Browser(s): Chrome / Edge / Firefox | Severity: High | Priority: P1

Observation: At 390px the primary CTA wraps and reduces usable spacing.

Recommended Fix: Use flexible width, min-height, and responsive typography; retest 320/375/390/430px.

CB-002 - Form select height differs from text input in Firefox compatibility scenario

Area: Forms & Buttons | Browser(s): Firefox | Severity: Medium | Priority: P2

Observation: Native/select rendering creates visible control-height mismatch.

Recommended Fix: Normalize appearance, line-height, padding, and min-height across controls.

CB-003 - Service card text wrapping causes uneven card heights at tablet width

Area: Page Layout | Browser(s): Firefox / Tablet | Severity: Medium | Priority: P2

Observation: One card becomes taller and disrupts row alignment.

Recommended Fix: Use grid auto-rows, consistent card min-height, and content wrapping rules.

CB-004 - Secondary button focus outline appears clipped in Edge compatibility review

Area: Buttons / Accessibility | Browser(s): Edge | Severity: Low | Priority: P3

Observation: Focus ring is visible but too close to container boundary.

Recommended Fix: Add outline-offset and avoid overflow:hidden on focusable control containers.
