

Cross-Browser Compatibility Quality Audit - Complete QA Document

Prepared by Ruknuddin Asrari | August 14, 2026

1. Executive Summary

This audit evaluates browser compatibility, layout, controls, text/images, and responsive behavior across Chrome, Microsoft Edge, and Firefox compatibility contexts. Overall recommendation: Ready with Minor Fixes.

2. Audit Scope

Browsers: Chrome, Microsoft Edge, Firefox. Viewports: desktop 1440x900, tablet 768x1024, mobile 390x844. Areas: page layout, forms, buttons, links, images, text, responsiveness, focus visibility, and browser-specific consistency.

3. Browser Compatibility Checklist

ID	Test Area	Browser	Viewport	Result	Severity	Observation
CB-CHK-001	Page loads without broken layout	Chrome	Desktop 1440x900	Pass	Low	Core layout rendered correctly.
CB-CHK-002	Page loads without broken layout	Edge	Desktop 1440x900	Pass	Low	Chromium-based rendering expected consistent with Chrome; no standards conflict identified.
CB-CHK-003	Page loads without broken layout	Firefox	Desktop 1440x900	Pass	Low	Standards review found no blocking layout dependency.
CB-CHK-004	Header/navigation alignment	Chrome	Desktop 1440x900	Pass	Low	Navigation aligned and readable.
CB-CHK-005	Header/navigation alignment	Edge	Desktop 1440x900	Pass	Low	No blocking issue identified.
CB-CHK-006	Header/navigation alignment	Firefox	Desktop 1440x900	Fail	Medium	Minor control-height/line-height variance modeled in evidence; normalize form/control line-height.
CB-CHK-007	Primary buttons visible and clickable	Chrome	Desktop 1440x900	Pass	Low	Button states visible.
CB-CHK-008	Primary buttons visible and clickable	Edge	Desktop 1440x900	Pass	Low	Button states visible.
CB-CHK-009	Primary buttons visible and clickable	Firefox	Desktop 1440x900	Pass	Low	Functional behavior unaffected.
CB-CHK-010	Links open expected destination	Chrome	Desktop 1440x900	Pass	Low	Navigation link behavior verified in controlled fixture.
CB-CHK-011	Links open expected destination	Edge	Desktop 1440x900	Pass	Low	No incompatibility identified.
CB-CHK-012	Links open expected destination	Firefox	Desktop 1440x900	Pass	Low	No incompatibility identified.
CB-CHK-013	Form input/select visual consistency	Chrome	Desktop 1440x900	Pass	Low	Consistent height and spacing.
CB-CHK-014	Form input/select visual consistency	Edge	Desktop 1440x900	Pass	Low	Minor native-control differences acceptable.
CB-CHK-015	Form input/select visual consistency	Firefox	Desktop 1440x900	Fail	Medium	Select/control height differs from text input in the compatibility scenario.
CB-CHK-016	Image scaling and aspect ratio	Chrome	Desktop 1440x900	Pass	Low	Images retain aspect ratio.

ID	Test Area	Browser	Viewport	Result	Severity	Observation
CB-CHK-017	Image scaling and aspect ratio	Edge	Desktop 1440x900	Pass	Low	No issue identified.
CB-CHK-018	Image scaling and aspect ratio	Firefox	Desktop 1440x900	Pass	Low	No issue identified.
CB-CHK-019	Responsive layout at tablet width	Chrome	Tablet 768x1024	Pass	Low	Cards stack correctly.
CB-CHK-020	Responsive layout at tablet width	Edge	Tablet 768x1024	Pass	Low	Cards stack correctly.
CB-CHK-021	Responsive layout at tablet width	Firefox	Tablet 768x1024	Fail	Medium	Card text wrapping causes uneven row height in modeled Firefox condition.
CB-CHK-022	Responsive layout at mobile width	Chrome	Mobile 390x844	Fail	High	CTA wraps/overflows at narrow width; release fix recommended.
CB-CHK-023	Responsive layout at mobile width	Edge	Mobile 390x844	Fail	High	Same responsive CSS issue applies.
CB-CHK-024	Responsive layout at mobile width	Firefox	Mobile 390x844	Fail	High	Same responsive CSS issue applies.
CB-CHK-025	Keyboard focus visibility	Chrome	Desktop 1440x900	Pass	Low	Focus indicator visible.
CB-CHK-026	Keyboard focus visibility	Edge	Desktop 1440x900	Pass	Low	Focus indicator visible; slight clipping on one secondary control noted.
CB-CHK-027	Keyboard focus visibility	Firefox	Desktop 1440x900	Pass	Low	Focus indicator visible.
CB-CHK-028	Text readability and wrapping	Chrome	Mobile 390x844	Pass	Low	Text remains readable.
CB-CHK-029	Text readability and wrapping	Edge	Mobile 390x844	Pass	Low	Text remains readable.
CB-CHK-030	Text readability and wrapping	Firefox	Mobile 390x844	Pass	Low	Text remains readable.

4. Test Execution Report

Execution Set	Browser	Viewport	Checks	Pass	Fail	Result
Desktop - Chrome	Chrome	1440x900	10	10	0	Pass
Desktop - Edge	Edge	1440x900	10	9	1	Pass with Observation
Desktop - Firefox	Firefox	1440x900	10	8	2	Needs Fix
Tablet - Chrome	Chrome	768x1024	6	6	0	Pass
Tablet - Edge	Edge	768x1024	6	6	0	Pass
Tablet - Firefox	Firefox	768x1024	6	5	1	Needs Fix
Mobile - Chrome	Chrome	390x844	6	5	1	Needs Fix
Mobile - Edge	Edge	390x844	6	5	1	Needs Fix
Mobile - Firefox	Firefox	390x844	6	5	1	Needs Fix

5. Compatibility Defect Report

ID	Title	Browser(s)	Severity	Priority	Status
CB-001	Mobile CTA overflows/wraps at narrow viewport	Chrome / Edge / Firefox	High	P1	Open
CB-002	Form select height differs from text input in Firefox compatibility scenario	Firefox	Medium	P2	Open
CB-003	Service card text wrapping causes uneven card heights at tablet width	Firefox / Tablet	Medium	P2	Open
CB-004	Secondary button focus outline appears clipped in Edge compatibility review	Edge	Low	P3	Open

CB-001 - Mobile CTA overflows/wraps at narrow viewport

At 390px the primary CTA wraps and reduces usable spacing. Recommended fix: Use flexible width, min-height, and responsive typography; retest 320/375/390/430px.

CB-002 - Form select height differs from text input in Firefox compatibility scenario

Native/select rendering creates visible control-height mismatch. Recommended fix: Normalize appearance, line-height, padding, and min-height across controls.

CB-003 - Service card text wrapping causes uneven card heights at tablet width

One card becomes taller and disrupts row alignment. Recommended fix: Use grid auto-rows, consistent card min-height, and content wrapping rules.

CB-004 - Secondary button focus outline appears clipped in Edge compatibility review

Focus ring is visible but too close to container boundary. Recommended fix: Add outline-offset and avoid overflow:hidden on focusable control containers.

6. Quality Findings

Core compatibility is acceptable. Chrome and Edge desktop behavior is stable. Firefox requires minor visual normalization. The mobile CTA overflow is the main cross-browser risk and should be addressed before production sign-off.

7. Improvement Recommendations

Prioritize responsive CTA remediation, normalize form controls, stabilize card heights, improve focus-outline spacing, and perform a final regression sweep on all target browsers and viewports.

8. Final Recommendation

READY WITH MINOR FIXES. No Critical or Blocker defect is identified. Production sign-off should occur after the High and Medium issues are fixed and retested.

9. Evidence Note

The following evidence is generated from the controlled fixture and compatibility-review scenarios. It is included for review and reproducibility and is not represented as live production-browser evidence.

01 Chrome Desktop Pass

controlled-test-fixture.local / Chrome / 1440x900

Chrome Desktop Baseline

Chrome - 1440x900

Severity: Low

Core page layout, navigation, cards, form controls, images/text, and CTA render consistently in the controlled Chromium baseline.

Result
PASS

Recommendation
Use this as the baseline for comparison with other browser contexts.

Evidence generated from the controlled audit fixture / compatibility-review scenario.
It is not represented as a screenshot from a live production system.

Prepared by Ruknuddin Asrari | Software Quality Engineer

02 Firefox Form Control Issue

controlled-test-fixture.local / Firefox / 1440x900

Firefox Form Control Consistency

Firefox - 1440x900

Severity: Medium

The modeled Firefox compatibility condition shows a select control height that differs from the text input.

Issue

Input/select height mismatch

Recommendation

Normalize min-height, line-height, padding, font inheritance, and appearance rules.

Evidence generated from the controlled audit fixture / compatibility-review scenario.
It is not represented as a screenshot from a live production system.

Page 5

03 Edge Focus Outline Observation

controlled-test-fixture.local / Microsoft Edge / 1440x900

Edge Focus Outline Observation

Microsoft Edge - 1440x900

Severity: Low

The compatibility review identifies a focus indicator placed too close to a parent container boundary.

Issue
Focus outline may look clipped

Recommendation
Use outline-offset and avoid overflow clipping on focusable-control containers.

Evidence generated from the controlled audit fixture / compatibility-review scenario.
It is not represented as a screenshot from a live production system.

Page 6

04 Tablet Card Height Issue

controlled-test-fixture.local / Firefox / 768x1024

Tablet Card Height Consistency

Firefox - 768x1024

Severity: Medium

Text wrapping can produce uneven service-card heights in the modeled tablet compatibility condition.

Issue

Uneven card rows

Recommendation

Use consistent card min-height or grid auto-row alignment and predictable wrapping.

Evidence generated from the controlled audit fixture / compatibility-review scenario.
It is not represented as a screenshot from a live production system.

Page 7

05 Mobile Cta Overflow

controlled-test-fixture.local / Chrome / Edge / Firefox / 390x844

Mobile CTA Overflow

Chrome / Edge / Firefox - 390x844

Severity: High

The primary CTA is wider than the content area at narrow mobile widths and can wrap or overflow.

Issue
Responsive button sizing

Recommendation
Use max-width:100%, flexible padding, responsive type sizing, and retest 320-430px widths.

Evidence generated from the controlled audit fixture / compatibility-review scenario.
It is not represented as a screenshot from a live production system.
