

Improvement Recommendations

Prepared by Ruknuddin Asrari | August 14, 2026

P1 - Responsive CTA

Use flexible sizing, max-width, responsive typography, and min-height rules so the CTA does not overflow at 320-430px widths.

P2 - Normalize Form Controls

Apply consistent min-height, padding, line-height and font inheritance to inputs, selects, and buttons.

P2 - Stabilize Card Layout

Use consistent card minimum heights or CSS Grid auto-row behavior so text wrapping does not create uneven rows.

P3 - Improve Focus Styling

Use visible focus outlines with outline-offset and ensure parent containers do not clip keyboard focus indicators.

Regression Recommendation

Retest Chrome, Edge, and Firefox at desktop, tablet, and mobile widths after remediation. Confirm buttons, links, forms, images, text wrapping, focus visibility, and responsive navigation.
